

Powering Underground Electrical Facility in Aseana City

Meralco and subsidiary MIESCOR recently signed a tripartite agreement with DM Wenceslao & Associates, Inc., the owner-developer of 110-hectare Aseana City—the masterplanned growth center poised to become the new Philippine tourism capital in the coming years. The partnership aims to advance the development of the underground distribution system that will power the growing power requirements of Aseana City. The underground system is parallel to Aseana City's development goal of creating walkable spaces and contributes to better aesthetic appeal, as it allows best use of land with clear and better sightlines and views, therefore increasing property values. During the ceremonial signing, Delfin Angelo Wenceslao (in photo, center), CEO of DM Wenceslao & Associates, Inc. said, "We envision Aseana as a next-generation city, and one of the key tenets is global infrastructure design

guideline and standards, that's why it's a no-brainer to implement this underground electrical facility for the whole city. We hope MIESCOR, with their global best practices and Meralco, with their transformative mindset, will help us build this out not just as contractor but as preferred partner who will help us build, plan, operate and maintain all our facilities within Aseana City." Together with Wenceslao in the photo are Victor Genuino, Meralco VP and Head of Corporate Business Group (left) and Angelito Bermudo, MIESCOR President and CEO (right).
