741866	HIGH PERFORMANCE LIQUID CHROMATOGRAPHY	SE	TDSN106	TEST EQPT & ACC	The following are the required HPLC specifications as per ASTM D5837-99 (2005) EQUIPMENT High-Performance Liquid Chromatography (HPLC) û The required analytical apparatus, an HPLC, consist of an injection device with sample loop, pumping system capable of mixing at least two solvents, reversed phase analytical column, UV detector or detectors with the ability to operate at a minimum of two wavelengths, and a data recording device or integrator. It is recommended that a precolumn packed with the same material as the analytical column be used to increase column life and remove interferences. Helium sparging of the mobile-phase solvents is recommended in some cases and in some types of HPLC equipment to displace atmospheric gases dissolved in the mobile phase and to prevent the evolution of air bubbles. The analytical apparatus may be heated several degrees Celsius above ambient if necessary to reduce variance in analytical results that may be caused by temperature fluctuations. Operation at ambient temperature or at a controlled temperature of 30 to 40 degree Celsius has been found satisfactory by some laboratories. HPLC Specifications 1. HPLC Pump - The pump must have capability to perform pumping system of up to four (4) solvents (7.1) and must have built-in capability to displace atmospheric gases dissolved in mobile phase solvents (7.3) by vacuum degassing. - The pump designed must be based on (7.1) on dual pistons in series, with proprietary servo-controlled variable stroke drive, floating pistons and active inlet valve. It must have 0.07% RSD flow precision. - It must have early maintenance feed-back (EMF) for continuous tracking of instrument usage in terms of solvent usage with user-settable limits and feedback messages. Electronic records of maintenance and errors. - The injection precision must be less than 0.25% RSD - The autosampler must be a built-in automated needle wash feature. 2. HPLC Thermostated Column Compartment (7.4) - The system must be cooled and heated by 10degrees C below ambient up to 80 deg C. 3. HPLC Detector (7.1) - The HPLC Detector must be based on photodiode array UV-Visible detection capable to monitor at least 2 wavelengths to as high as 8 wavelengths. - The wavelength range must be from 190-950 nm with at least 1024 number of diode. - The detector must used simultaneous Deuterium and Tungsten lamp with programmable slit width from 1nm to 16 nm - The detector must be +/- 1nm wavelength accurate. 4. HPLC Columns (7.6) - Nova-pak C18 with Guard Column 5. Others (8) - Acetonitrile HPLC Grade - 2- Acetylfuran û 99% purity , CAS # 1192-62-7 - Electrical Insulating Oil û Virgin Oil of mineral origin - 2-Furaldehyde û 99% purity, CAS # 98-01-1 - Furfuryl Alcohol û 99% purity , CAS# 98-00-0 - Hexane û HPLC Grade - 5-Hydroxymethyl û 2- Furaldehyde û 99% purity CAS#67-47-0 - Methanol û HPLC Grade - 5-Methyl-2-Furaldehyde û 99%, CAS #620-02-0 - Silica SPE Column û Solid phase extraction column filled with 500mg of silica - Toluene û HPLC Grade - Vacuum Manifold with Vacuum Pump - Volumetric test tube û volumetrically designed to measure in 0.10mL graduation. - Vortex Mixer - Water û HPLC Grade
